

Meeting pet owners' expectations when their pet has cancer is challenging for primary care veterinarians. Owners want:

- ▶ Continued involvement of their primary care veterinarian
- ▶ Referral to specialists
- ▶ Collaboration with other veterinarians
- ▶ Answers to questions

This WSAVA Oncology Committee Fast Fact offers guidance on addressing owners' questions about their pet's cancer diagnosis.

SURGERY

Surgery is an important cancer treatment

- ▶ A second opinion with a specialist surgeon may identify advanced surgical options
- ▶ Incisions may be larger than expected
- ▶ Promising a cure should be avoided

CHEMOTHERAPY

Pet owners worry about side effects

- ▶ Side effects are less common than pet owners expect
- ▶ Side effects are less severe than pet owners expect
- ▶ Most pet owners would choose chemotherapy for a second pet

RADIATION THERAPY

A pet owner survey reveals concerns about:

- ▶ Side effects which are less severe than anticipated
- ▶ Repeated anesthesia
- ▶ Most pet owners would choose radiation therapy for a second pet

FINANCIAL DISCUSSION

Pet owners want veterinarians to initiate these discussions.

- ▶ Finances should be addressed in context of pet's health benefits

WRITTEN COMMUNICATIONS

- ▶ Documents for pet owners should use simple, clear language that an 11-13-year-old can easily read.

This QR code has a list of articles including surveys of pet owners about cancer treatment and communication studies.

This WSAVA Oncology Committee Fast Fact Sheet has been produced with the generous support of Hill's Pet Nutrition, IDEXX Laboratories, Boehringer Ingelheim and Zoetis.
